April 17, 2007

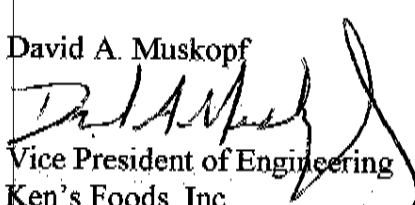

Dear Mark,

We are about to complete our fourth year of operations at our Las Vegas, NV manufacturing plant, so it must be over five years since you and I met and we put your World Water Works team to work on designing and installing a successful waste water treatment operation to handle the needs of a very different situation in Clark County. Your fresh approach and unique equipment designs made it easy for me to feel comfortable dealing with the construction and start up of another new salad dressing plant and not be burdened with all of the process waste water issues.

As you know, we have not had to make any modifications to the original system, and have remained in compliance as our discharge volumes continue to increase. This alone says a great deal for World Water works design. In contrast, as we continue to maintain our annual double digit growth through out the company, we have experienced two major expansions to our George treatment plant in this same period in order to stay in compliance.

World Water Works continued support and communication with the Las Vegas operation has been exceptional. I am sure in the near future we will need to expand that operation as our manufacturing plant grows. We look forward to working with you in this effort, as well as other opportunities that may come about at Ken's Foods other plants in Massachusetts and Georgia.

David A. Muskopf

  
Vice President of Engineering  
Ken's Foods, Inc.
