

World Water Works  
4061 N.W. 3<sup>rd</sup> Street  
Oklahoma City, OK 73107

Attention: Mark Fossage

March 15, 2007

Dear Mark,

I would like to take this opportunity to thank you, and your team, for the systems and services that you have provided since our primary wastewater treatment system was installed in 2001.

During 2001 United Corrstack entered a "consent order and agreement" with the City of Reading, to improve the quality of effluent from our paper mill operation. The primary issues were "color" and "oil & grease".

The World Water Works Team worked with us to:

- Develop process trials that identified a solution.
- Engineer an equipment solution to support the process.
- Deliver a system that brought us into compliance with our operating permit.

The innovative "plastic welded" vessels saved us money, addressed concerns with weight loading, and addressed corrosion concerns in a very aggressive pH environment.

World Water Works has continued to stay in touch, and in the rare case where we experienced an equipment issue, they have always stood behind their product.

Our experience with World Water Works has been a pleasure. We look forward to working together in the future.

Art McLaughlin

A handwritten signature in black ink that reads "Art McLaughlin".
